LETTER OF TRANSMITTAL

22 December, 2024

To

Golam Morshed Shahriar Tanim

Assistant Professor

Army Institute of Business Administration,
Sylhet.

Subject: Term paper on business plan.

Dear Sir,

We have submitted our business as a term paper of the course EDP-3501 (Entrepreneurship) for the last presentation of this course. We believe that, creating such paper will help us to enrich our adaptability in the long run when we will involve ourselves in the competitive field. We are grateful for your advices and great cooperation. We kept no stone unturned to go deep into the matters and make full use of our capabilities in making the paper meaningful. However, there may be some mistakes and shortcomings. We would like to place this report before you for your kind approval. For any of your further query, we will be at your disposal.

Yours faithfully

MD Saiful Islam Tanmoy

Executive Summary

Bear's is the only Bangladeshi whey protein manufacturer for gym and fitness enthusiasts. Bear's will provide Protein supplements that are good in quality and low in cost. Our company will operate through an online page and deliver nationally. We also aim to reduce the enormous amount of whey wastage made by the sweetmeat producers in our country which will not only allow us to drastically minimize our cost but also position ourselves as an environment-conscious brand.

The Business Plan

Our business aims to provide nationally produced high quality organic whey protein to our target market. We will collect whey from sweetmeat companies and turn them into whey protein to meet the local market gap.

Sweetmeat producers discharge almost 90% of the milk they use as whey wastage. Which eventually causes Soil pollution, water pollution, soil degradation and drainage problems. We will reduce our cost by procuring the whey from the waste of the sweetmeat brands such as Salam Dairy Farm which we have a personal relation with. Also, we will rent dehydrator machine on contract which will allow us to produce whey protein powder without buying a machine as we will only produce our product in limited amount at the first stage.

We can also gain cost leadership by cutting short our raw material and production cost. Also, as there are no other local brands, the prices are high as all of them are imported. We have an advantage there, also. Moreover, a patriarchal image will help us connect to customers in this current national situation. We aim to sell 1kg portion of whey protein at 1890 BDT whereas other brands available have prices starting from 3500 BDT.

We will need a BSTI approval for our brand's credibility. We will need the B type certificate as we fall under the criteria "Processed Food" with required documents such as:

1. Copy of the applicant's company's trade license.
2. Copy of the TIN certificate.
3. List of machinery used for production in the factory.
4. Copy of the trademark registration of the applicant's product.
5. All the information on the package or label of the product such as manufacturing date, expiry date etc.
6. Information on all components of the product.
7. Flow chart of factory production processes.

Besides, more documents may be required.

The factory will be inspected within a few days after the application is submitted. During the inspection, information will be collected on the raw materials used in the production of products, various stages of the production process, existing inspection systems in the factory, health and environmental conditions, product storage systems and the persons engaged in inspection work. And will also collect samples of the product and seal it.

Then we have to bring the sealed sample to the BSTI office after paying the prescribed fee. The sealed sample will later be tested in the laboratory. After passing the laboratory test, the license will be issued.

To better understand our business's position, we have conducted a SWOT analysis:

Strengths:

- Lowest production cost
- Lower price
- Unique flavors addition
- No local competitors

Weaknesses:

- Smaller industry comparing to the vast demand
- No initial brand value
- Low investment
- Weak distribution

Opportunities:

- Low foreign currency reserve might stop the imports of foreign products.
- With no international supply, the market might become a monopoly.
- Attract giant investors.
- Collaboration with fitness giants.

Threats:

- Future local competitors
- Lack of experience

Logo and Tagline

Tagline: "Fuel your strength, sustainably"

Mission statement

"To reorganize the Protein Beverage Industry of Bangladesh for making a healthier and stronger generation by offering premium, eco-friendly, and affordable nutritional solutions"

Industry Analysis: Porter's Five Forces**a. Threat of New Entrants**

- **Moderate to High:**
 - Very easy to enter the market due to the lack of local competitors.
 - Low brand loyalty.
 - Barriers to proper supply chain management system.

b. Bargaining Power of Suppliers

- **Low:**
 - The main key raw material Whey Protein has multiple global suppliers which allows negotiation.
 - Available local resources of packaging materials.

c. Bargaining Power of Buyers

- **Moderate:**
 - Customers may like to buy local cost-effective & eco-friendly products instead of alternative imported products.

d. Threat of Substitutes

- **Moderate to High:**
 - People may use alternative imported products which are costly or homemade protein shakes or natural protein sources like eggs, lentils, etc.

e. Industry Rivalry

- **Low:**
 - Currently low competition with local dealers but threats of new players.

Marketing Strategy

a. Segmentation

- **Psychographic:** Health-conscious individuals who always seek competence and sustainable solutions.
- **Geographic:** City Corporation areas of Dhaka with higher gym memberships.
- **Behavioral:** Health-conscious Customers, love to buy cheap and eco-friendly products, and also early adopters.

b. Targeting

- Fitness lovers & health-conscious people (18–35 years) who are active in gyms and sports activities.
- Millennials and Gen Z consumers are interested in eco-friendly, cheap, and health-conscious brands.
- Athletes and diet-conscious people.

c. Positioning

- Tagline: “Fuel Your Strength, Sustainably.”
- Showcasing eco-friendly values like reducing whey pollution as well cheap affordability.
- Use emotional attachment & branding to connect with health objectives and national pride.

Marketing Mix

a. Product

- Ready-to-drink and powder formats.
- Protein products fortified with local ingredients for proper nutrition.
- Affordable pricing compared to imports.

b. Pricing

- Price products significantly below rather than imported products. .

c. Placement (Distribution Strategy)

- Operate through social media platforms for quick and easy online placement.
- Partnering with local and higher gym memberships for on-site sales.

d. Promotion**(1) Advertising**

- Product advertising in local newspapers like Prothom Alo (Health & Fitness section).
- Social media campaigns on Facebook and Instagram.
- Billboards in high-traffic areas with minimalistic, eco-friendly designs.

(2) Sales Promotion

- Discounts for first-time buyers or bulk amounts of purchases.
- Bear's Club (loyalty card; minimum 1 year) members where buyers earn a certain amount of points redeemable for discounted price.
- Flash sales during festive seasons.

(3) Digital Marketing

- Partnering with fitness influencers for social media marketing.
- Create interactive content like fitness tips on social media platforms.
- Gamify rewards system for Instagram stories tagging Bear's products.

(4) Public Relations

- Partnering with fitness expos, local marathons, and sports events for better brand visibility.
- Conduct workshops online, at fitness centers, etc about fitness and nutrition.

(5) Direct Marketing

- Personalized email marketing to fitness club members for promotion and product feedback.

(6) Events & CSR:

- We may organize “Bear’s Fit Fest” including fitness challenges, product sampling, and expert talks.
- CSR initiative: We will donate a percentage of sales to community health and nutrition programs

Business Canvas Model

Breakeven Point = Fixed Cost / (Revenue – Expense)

=1000000/326484

= 3.06

It will take more than 3 years approximately to recover our initial investment.

Conclusion

Bear's- The goal is to revolutionize the Bangladeshi Whey Protein industry by introducing a sustainable, affordable, and high-quality product that meets the growing demand for fitness and fitness solutions. By leveraging the untapped potential of whey wastage from local

sweetmeat producers, Bear's positions itself as an eco-conscious and socially responsible brand.

With a clear strategy to target individuals with innovative marketing and divestment secrets, achieving cost gains and fitness, beer development can be a public one. As with the lack of early business candidates and voting limitations, unique value propositions, effortful pricing and local governance provide a strong support for first-mover growth.

Financial projections show promising profitability with first year net profit of tk 326,484 and estimated breakeven in about three years. This indicates that, along with strategic reinvestment, detailed discussions are underway to further engage beer, expand reach and activate local whey proteins.

The bear business is just one movement toward environmental resilience, creating a movement and an activism initiative for stakeholders alike.
